

How are choices made about the use of resources?

1

Look at the image and answer the questions.

What do
you see?

What do
you think?

What do
you wonder?

Vocabulary

resources
wants
needs

limited
unlimited
natural

human
capital
sustainably

2 Watch the video *Girls AFL Change Room Battle*.

3 Summarise the two main issues discussed in the video? Write them below.

4 Both issues are really about safety. Do you think safety is a need or a want?

I think _____

Why I think that

5 Choose one of the issues from the video and list the resources that would be needed to fix the issue.

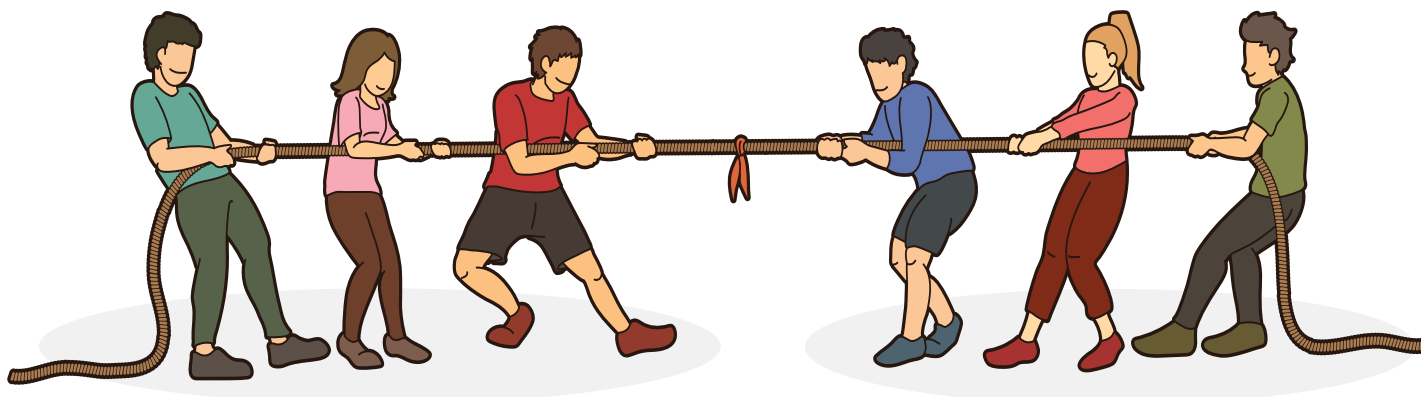

Issue _____

Natural resources needed to fix it	Human resources needed to fix it	Capital resources needed to fix it

6 Money is usually needed to pay for resources but it is a limited resource. Choices need to be made. Imagine there was only enough money to fix one of the issues.

In a group use a tug of war routine to decide which issue would be fixed.

Use the image of the rope to represent two sides of the argument. Think of ‘tugs’ (reasons) for the argument on each side. Everyone writes their justifications on sticky notes and sticks them on the corresponding side.

Arguments **for** making separate girls' change rooms.

Arguments **for** making the ground safe to play on.

7 With your group, discuss all the arguments and then decide which issue would be fixed.

8 Think of some ways both issues could be fixed. Write them below.

Communities will always have unlimited wants and limited resources. We have an unlimited want for water but it is a limited resource. Water can also be both a need and a want. We need water to drink but we want to water the grass on the playing fields.

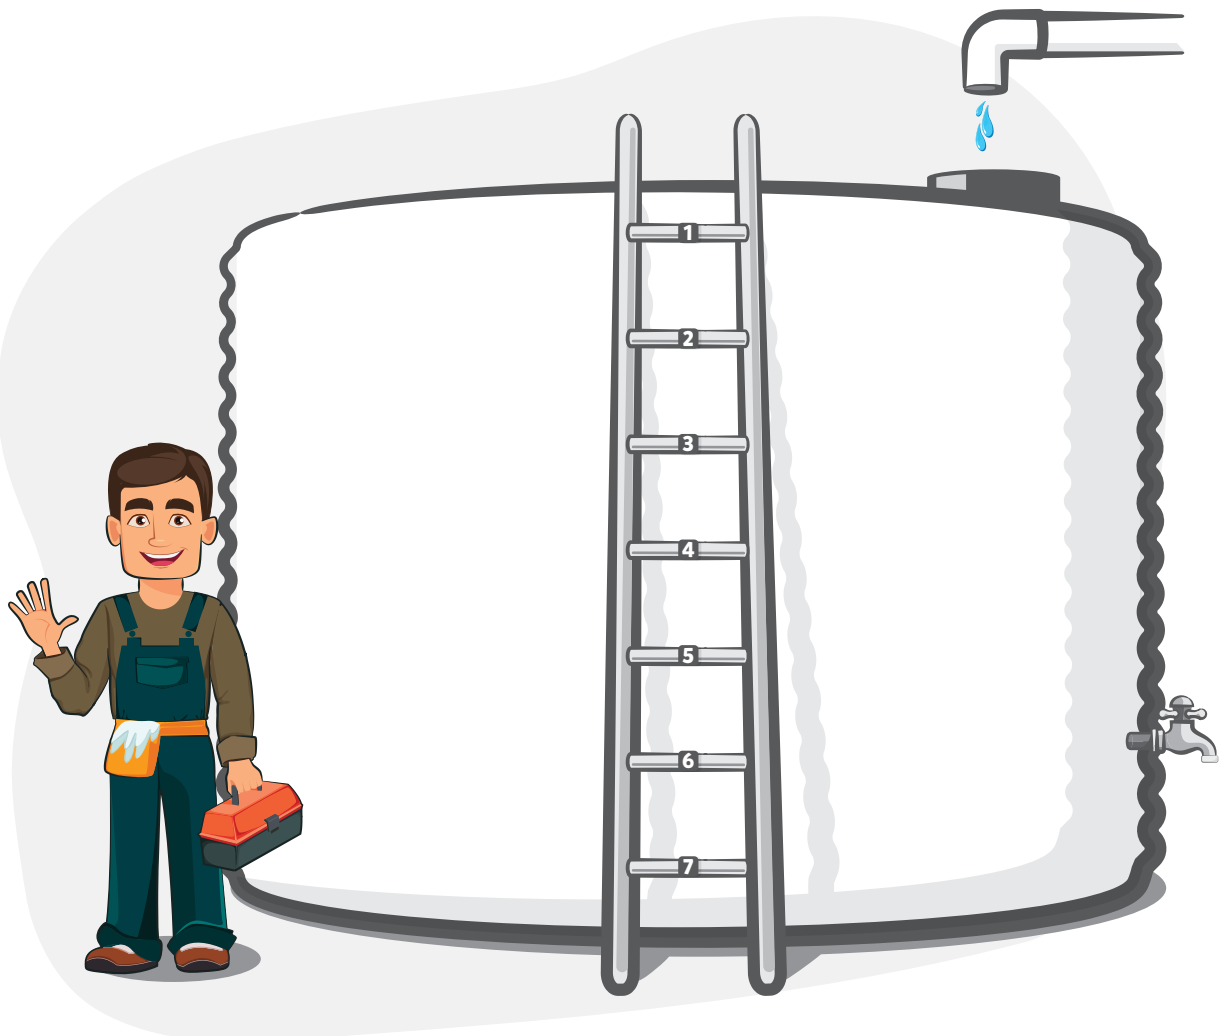

During a drought communities will often choose to have water restrictions. This includes not using sprinklers on lawns so sporting fields will not have green grass. Planning for the future can help reduce the scarcity of a resource.

9

Watch the video about storm water harvesting.

10

Brainstorm all the ways people and communities use water. Write them in the water tank. Prioritise them on the ranking ladder.

11

Justify your **third** ranked use.

12

The resources needed to satisfy needs and wants can often be supplemented by sponsors. What would you do if a soft drink company offered \$5000 to fix your sporting grounds on the condition that you advertise their product and sell it in the canteen?

Complete the KWHLA chart with your thoughts.

Know What do you already know?	
Want What do you want to know?	
How How will you find out?	
Learned What have you learned?	
Action What action will you take?	

13

King Midas was a character from Greek mythology who had the ability to turn everything he touched into gold. How do you think having gold as an unlimited resource affected his life?
